## PRESS RELEASE

For Immediate Release...

*Complete mobility and no pumping a keg!*

South Plainfield, NJ based Leland Limited introduces their second generation gas powered tap for beverage kegs, the **Leland FlexTap™**. This unique tap revolutionizes the way beer, soda and wine is dispensed from kegs combining portability, efficiency, and preservation of the beverage without hand pumping or cumbersome gas equipment.

Beverages in kegs are pure, essentially without any preservatives. Since air contains bacteria and other contaminants, injecting it into beverages is damaging. Taste and freshness suffer considerably, especially when the keg is from the night before. Bars and restaurants use pure CO<sub>2</sub> and Nitrogen exclusively to dispense all their beverages.

The **Leland FlexTap™** is completely assembled with a precise pressure regulating valve unit conveniently attached to a US Sankey coupler with a flexible beverage hose and faucet. Disposable cylinders of 99.5% pure CO<sub>2</sub> or Nitrogen are easily installed in the regulator which supplies the needed pressure in the keg to push out the beverage and preserve it. No more flat beer or off tasting wine.

Each CO<sub>2</sub> cylinder will push about 7 ½ gallons, which is a ¼ keg. So it will take two cylinders to fully preserve and dispense a ½ keg. 1/6 kegs of wine are easily dispensed with an available Nitrogen cylinder. The CO<sub>2</sub>Cylinders retail for about \$10.00 in area liquor and beer stores and Nitrogen cylinders are slightly more. The **Leland FlexTap™** unit will retail for \$180.00 or it can be rented from most stores selling kegs.

Mobile dispensing using the **Leland FlexTap™** is as simple as attaching the coupler to the keg. Leland is best known in the military, marine and aerospace industries for their high quality CO<sub>2</sub> cylinders used in inflatable life jackets. Leland also makes the famous Leland CO<sub>2</sub> PicnicTap® and the Leland CO<sub>2</sub> FridgeTap® all available at retailers.
