

Mr. Fizz Sr. Model 11105 Warranty Information

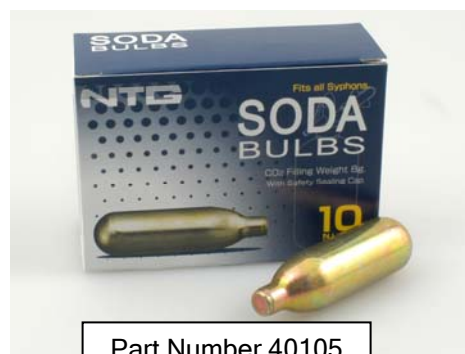

Leland warrants the soda maker to be free from material defects for as long as you own it. Parts which are not covered are gaskets, washers, O rings and plastic tubes. These are available for purchase at a reasonable cost plus freight. We do not impose any type of handling fee.

Like a flashlight that utilizes a standard sized replacement battery, our soda makers are designed to accept all brands of standard 8g CO2 cartridges labeled for a seltzer bottle.

However, not all brands of 8g CO2 cartridges are of the same grade. Some may have microscopic particulate, which can create a situation where the internal gaskets in the soda maker leak. The leaks usually occur at or around the area of the puncture pin.

The best possible advice we can offer is to use the brand of 8g CO2 cartridges, which is made in the same factory as the soda maker. From experience, those 8g CO2 cartridges have never caused a leak. This attention to detail will provide a significantly higher level of satisfaction for you.

We offer these through our MrFizz.com site. If you register for the Seltzer Club on that site, you will receive offers such as free freight and seasonal specials.

Another satisfaction issue may be a situation when the water shoots out of the dispensing nozzle as a new 8g CO2 cartridge is inserted. The inside of the head has a valve spring. You may notice the dispensing lever returns to its original position after squeezing it. This same spring is responsible for relieving excessive pressure. Excessive pressure in the bottle will push against the valve spring causing the piston to open and water to shoot out. This is a safety feature. So why does this happen?

The overfill tube is supposed to prevent overfilling with water. There must be a 3-4" gap of air space over the water for the CO2 from the cartridge to expand into. Too much water means too much pressure and the valve will open. Reduce the amount of water in the bottle leaving an air space of about 3-4", roughly the length of the overfill tube.

Remember, we are a 45 year old company that has grown only because of hard work and satisfying your needs. We appreciate that and your patronage. Your satisfaction is our priority. We do not want you to be inconvenienced in any way. The Mr. Fizz Sr. is a very high quality device and will last for many years.
