

LELAND
CO₂
FRIDGE TAP™

PROFESSIONAL BEVERAGE DRAFTING

A complete kit including tools, components
and two full CO₂ cylinders

Add draft
dispensing
to any
refrigerator

In just a few minutes, you can add draft beer or soda to any refrigerator and still have usable space for food storage.

The Leland CO₂ FridgeTap™ requires one 74 gram CO₂ TapGas® cylinder to preserve and push the beverage.

Two filled cylinders are included in the kit. One cylinder pushes better than a ¼ barrel.

Replacement cylinders are found at beer stores nationwide and online.

Leland's adjustable pressure regulator controls just the right amount of CO₂ to preserve and push the beverage just like your favorite pub.

One simple adjustment knob to turn the gas on and off; you are in control of your own draft system.
