

LELAND
CO₂
FRIDGE TAP™

**CLEAN
TROUBLE FREE
INSTALLATION**

1/6 keg shown with the regulator hanging on the side of the keg. Simple.

The ONLY refrigerator conversion kit that comes with two filled CO₂ cylinders, a hole saw and does not consume the whole interior space.

CO₂ cylinders, which are sold in a convenient clear clam shell containing two cylinders. Repeat business on a reliable consumable brings in store traffic.

The gas regulator is rugged, single point adjustment and has been used in the beverage industry for over 25 years.

The heart of the system is the gas supply. It takes quite an effort to make a safe cylinder, clean it thoroughly and fill it with only the finest pure filtered CO₂.

Leland has been in the beverage gas business for over 43 years and is ISO9001 registered. Our Leland CO₂ TapGas® cartridges are approved by the "Big 3" breweries in the US and dozens of micro-breweries. You cannot use a paintball or welding CO₂ cylinder with this equipment. It not only voids the warranty, but the dirty oily gas that comes from those types of gas cylinders will always contaminate the gas regulator and the beer.

Consumers and your employees need to be taught the difference; it only takes a moment to say it and your customer will have many years of trouble free operation.

~~And because of the small size of our gas cylinder can we ship it UPS without the extra Haz-Mat fees normally associated with large CO₂ cylinders.~~

Once punctured, the gas is gone out of the cylinder and it should be recycled with household **cans as** these are made from steel. The steel is melted down to make bars for the windows on prisons for those who do not recycle.

Let's work together and bring a great value to your customers, we already took the first step, now you need to take action, give us a call.

Restaurant Grade Components made in the USA 50%, Japan 40% & China 10%

TOOLS NEEDED BY THE CONSUMER:

Drill, 7/64" bit, Phillips screwdriver, adjustable wrench, tape measure, safety glasses, painters tape and a pencil.
